## WHO WE ARE:

Paladin Trading Limited is an innovative, integrated security solutions provider specializing in advanced physical security technology, automated systems, services and solutions.

## THE COMPANY PURPOSE:

Paladin Trading Limited is an innovative, integrated security solutions provider in the scope of IP Surveillance, Hytera two-way radio communication, and home security.

We offer specialized services in Structured cabling, IP Telephony, WI-FI and build networks for all kinds of buildings, including Office blocks, apartments, hotels, and Learning Institutions.

## 1. HOME SECURITY

We provide a seamless system that succeeds quite well at what its set to do i.e secure your home simply and flexibly from intruders and enviromental threats, letting you monitor everything remotely, providing an ideal balance of high quality service , ease of use and value. We supply & install intruder alarms, CCTV, solar flood lights, gate automation, electric fence, home automation, perimeter beams, WIFI, MATV, solar energy & water heating systems.

### Smart Home Alarms

The latest security features allow total control from your smartphone

- Control your home alarm from anywhere
- Live notifications on your smartphone
- Connect with your home IP cameras

## 2. SOLAR ENERGY SOLUTIONS

Solar PV or Photo voltaic is simply changing light from the sun into electric energy. A solar PV panel uses cells to absorb the Sun's rays and converts it into Direct Power which is later inverted for use for all electrical loads. PV panels allow immense energy saving at lower capital costs. When choosing a solar PV panel there are 2 major types with the mono-crystalline panels widely agreed to be much superior in short- and long-term performance as compared to the poly crystalline panels which are however cheaper. Paladin offers Solar solutions in the below main categories:

1. **Off-Grid Solutions** - These are systems for clients who are totally off the grid and need to use solar as their main source of power. This is a system with batteries which can be configured to work with a diesel generator as secondary power if needed.
2. **Hybrid Solutions** - These are systems for clients already on the grid but seeking either uninterrupted power supply hence a solar backup unit with batteries or seeking to reduce their grid consumption where Solar can be used as the primary power backed up by the grid.
3. **Rooftop / Grid Tie systems** - These are systems for clients who seek to reduce their current grid power usage and have a high daytime power consumption load. These systems are solar modules without batteries.
4. **Agri Solutions** - These are solar irrigation and water supply solutions as submersible and surface pumps.

### 3. IP SURVEILLANCE

Our IP surveillance solutions serve a wide spectrum of businesses as well as demanding home users around the country. Our portfolio ranges from high-resolution and wireless IP cameras via network video recorders, to weather and vandal proof outdoor surveillance equipment with night vision function. We offer lower operating costs and continuously protect everything from airports to malls, to corporate buildings and train stations.

## 4. COMMUNICATION SOLUTIONS

Our portfolio of communication devices, systems and software's applications offer voice, video, and data services, providing fast and reliable connectivity solutions for mission-and business-critical communications.

Our solutions enable customers to do more with less by improving efficiency and raising productivity of a day-to-day operations. Digital and Analogue Two-way radio communication, Wireless data communication equipment, Command and dispatch and Guard patrol systems.

We offer Digital migration radios, push to talk over cellular (POC Radios), Portable and mobile radios.

## 5. STRUCTURED CABLING SOLUTIONS

Whether your business requires fibre or data structured cabling, we provide professional courteous expert services. We install a variety of network cabling including fibre optic, CAT6/6A and Coax. Our Project Coordinators & Project Manager perform regular site visits to inspect quality and job site cleanliness.

After each cabling project, we deliver copy of your floor plan showcasing each cable location and port number. We also provide project documentation including your floor plan, manufacture warranty and technical specification sheets and certified fluke test results upon client's requests.

When you work with us, you can expect high-quality cabling.

## 6. NETWORK SOLUTIONS

Our solutions cover the entire spectrum of modern Data networks. We design advanced customized networks that will meet all your business needs including performance, incorporating VoIP solutions etc. We provide reliable services in all networking areas including Firewalls, Switching, Servers, Storage, and Structured Cabling. A well-designed network setup increases systems uptime, optimizes scalability, and maximizes the return on investment while decreasing your technology footprint and minimizing costs to your business

### Network Security

With the latest in firewall technology, we can keep your network safe and at the same time fulfill your end-user and server security requirements, without infringing on the functionality and speed of your network. Network Security is an organization's strategy and provisions for ensuring the security of its assets and of all network traffic. Network security is manifested in an implementation of security policy hardware, and software. For the purposes of this discussion, the following approach is adopted to view network security in its entirety. Our process entails installation, configuration, testing, commissioning, and maintenance of network firewall.

## 7. WIRELESS NETWORKS

With the world going wireless, technology has opened the doors to a newer level of communications. As wireless technology is quickly developing and most of us depend on Wi-Fi one way or the other, the impact it creates in our lives is immeasurable. We Provide wireless network access that is secure, convinient and efficient.

## 8. IP. TELEPHONY

Paladin Trading delivers Voice over IP Telephone and PBX solutions for businesses and organizations that want to be efficient and mobile.

### What is IP Telephony?

IP Telephony is also known as Internet Protocol telephony. IP Telephony and IP PBX (Private Branch Exchange) makes use of internet protocol to communicate digitally through a high-speed internet telephone rather than a traditional fixed phone.

Our IP Telephony Services & Solutions:

- VoIP phones
- PBX Systems
- SIP Trunk
- Call centres

## 9. CHURCH ICT SOLUTION

Paladin Trading specialises in creating ICT solutions that deliver digital transformation for churches. We can develop and implement an ICT system that helps your church to improve its communications with your congregation, plan and deliver your community and engagement activities more efficiently and collaborate more easily with other churches in your ministry area.

### Ip surveillance

Churches and other places of worship naturally place great emphasis on creating an open and welcoming environment. Unfortunately, this can sometimes lead a church to neglect security, which leaves them vulnerable to acts of vandalism or theft. A properly installed church video surveillance system can help to create a safe and secure environment for congregations and the people they serve.

## Hytera communication solution

Two-way radios are a proven, effective tool for Churches in multiple ministries. There's more involved in a worship service than the message. Children, Parking, Sound, Security, and Worship Center Seating all require almost simultaneous coordination among key Leadership.

While there is little you can do to prevent an incident from occurring, two-way radios allow for instant communication to help defer, prevent, neutralize, or respond should an incident occur.

## Wireless networks

Connectivity offers many practical benefits for churches as below  
Interactive electronic displays and app-based guided tours can bring cathedrals and larger churches to life for visitors. This may not be appropriate for every church building engagement however can be increased in other ways:

- Providing interactive audio-visual accompaniments for services.
- Collecting contact details in a digital guestbook.
- Offering visitors, the opportunity to log in to guest Wi-Fi.
- Live-streaming services, concerts, or other community events, even weddings.

Where the church building also serves as a regular workplace for clergy and church personnel, connectivity is needed to conduct daily business: maintaining church websites, updating social media accounts and other communication channels not to mention record-keeping and bank accounts transactions.

## Audio systems

Your church's sound system needs to sound great and perform consistently, whether your pastor is delivering the message, the choir is singing an inspiring work of music, or the worship team is rocking out on guitars, keyboards, and drums. Regardless of your specific needs, there are key components that are part of every sound system. For general prayer services, weddings and funerals, its clarity of voice and a controlled delivery that's desirable. This is especially true in some of the larger buildings being adapted for church and ministry use, where large open spaces and high ceilings can lead to audio issues. We are here to advise you on the optimum choices for both the equipment types and their placement in the space, helping you to achieve the best results possible from the budget you are working with.

## 10. CONSTRUCTION SITE SECURITY

Paladin trading limited is tailored to fulfil the dynamic demands of the construction industry. Construction sites require the ability to stay within budget to be successful. A key element is the ability to minimize losses due to pilferage, vandalism, ghost workers, risks of injuries resulting to litigation, legal claims and liability, with a budget-friendly construction site security solution. We provide construction site security solutions that limit access to construction sites and give our clients the best value for their investment through integration of superior manpower and cutting-edge technology to improve processes.

### Industry demands

- Software triggers to CCTV management software
- Video tracking system linked to CCTV
- Workers / Employee attendance management system.
- Intrusion Detection, Alarm & Monitoring Systems
- Perform safety audits remotely
- Safety Violation Tracking
- Risk & Liability Mitigation

## BRANDS

	Solution	Brand
Home Security	Surveillance Home Automation Intrusion Detection	Hikvision, Dahua, Sunnel, Bosch Home Assistant, TIS, Texecom
Communication	Two way Radios DMR, POC, VHF	Hytera
Structured Cabling	Cabling Solutions	Simplifi, Giganet, Siemon
Network Solution	Network Security	Unifi, Dlink, Fortinet
Wireless Networks	Wi-Fi Solutions	Unifi, Ruckus, Cisco
IP Telephony	VoIP Phone PBX Systems SIP Trunk Call Centres	Grandstream, Cisco, Matrix, Yealink
Church Solution	Audio Visual Solution	Bosch, Electro-Voice, Toa

Our core values are geared towards creating customer value by embracing innovation and client-focused solutions.
